

SuperGreen Solutions is more than just a business. It's a movement to preserve the environment. We offer energy solutions and improve our future. Provide substantial savings for businesses and individuals.

Dear Carlos and ATAVUSGROUP

Apologies for time line but we like to cross our T'S and dot our I'S.
We want to make sure from the start every project, to put it simply DONE RIGHT! The first time.

Some system details

- The inverter system consists of 24 each separate 28kW transformer-less 1000VDC max inverters.
- 480V 3 PHASE

ADVANTAGES/BENEFITS

Significantly LESS EXPENSIVE.

- This has several big advantages over a design using 2 or 3 giant skid-mounted inverters.
- Easy shipping and installation - no special lifting equipment needed.
- Easy to replace if needed, so immediate repair of the PV system, instead of 12 weeks delay plus complex and expensive shipping.
- Multiple inverters make it possible to easily split and group the 2,625 PV modules over several different buildings, roofs, carports etc.
- Built-in AC/DC disconnect.
- Web based monitoring.
- Dual MPP trackers.
- We quoted 480V 3-phase inverters.

Let us know voltage, and check with us on delivery time if different.

RACKING SYSTEM

- The Eco Foot racking system is very versatile, and allows installation in smaller groups of modules without significant cost penalty.

No roof penetrations.

Comes stacked, so very compact and inexpensive to ship compared to traditional racking.

Office: 603-7872; 698-7472
Address: 69 Wulff Road, Nassau, Bahamas

SuperGreen Solutions is more than just a business. It's a movement to preserve the environment. We offer energy solutions and improve our future. Provide substantial savings for businesses and individuals.

Easy to move in case of roof repair or modification.

. Made in the USA.

PV MODULES

- The PV modules quoted are available now.

The quote is good for 30 days, after which time, we would need to re-evaluate module availability and pricing.

Won't necessarily be more expensive, but might differ in wattage.

PV is a commodity, prices change almost daily.

25 year guarantee on performance.

The PV alone will need six 20ft containers.

- The overall price of \$3.80 - \$4.50 per watt (this may drop or increase pending provisions listed below) for the system, complete with racking and inverters, installed.
- We don't have a freight estimate yet, but it will drill down on this once we are in phase two with project.

Provisions

There are numerous factors we still need to drill down on. Namely sub systems, roofs, buildings, cable runs, voltage, transformers etc

All installation will be certified by a Team of Special Engineers who specialize in installing megawatt systems and commissioning.

These guys take countries off grid so they know their stuff and have the world wide experience to do it RIGHT.

SuperGreen Solutions is more than just a business. It's a movement to preserve the environment. We offer energy solutions and improve our future. Provide substantial savings for businesses and individuals.

We will also prefer to be a partner with you in this and are so confident we are willing to put skin in the game and hold back 10% for 30 days after install to insure you are happy.

If we are selected we will also give your project worldwide exposure through our Franchise and put you on the website globally. This will give you tremendous exposure and open doors for conferences, group meetings etc etc.

Super Green Solutions has a worldwide reputation to maintain and has over 25 years' experience in the industry.

As regards to equipment, modules, inverters, racking etc full specs and details will be provided showing brand and QUALITY with WARRANTIES in writing in phase two of the process.

A full detailed quote will be prepared and delivered in writing in phase two of process.

We look forward to working with you on this project and insure together we will make this venture a complete success.

Thank you in advance for your business.
